

What do we do?

Biyuyo leases bitcoin miners to Venezuelan business owners, to generate mining rewards and improve their access to currently restricted international financial markets.

How do we do it?

Biyuyo purchases latest generation bitcoin miners from top manufacturers like Bitmain. These are always paid for in bitcoin or bitcoin cash.

1

From the factory, the miners are shipped to a distribution center in Zona Libre, an economic free zone in Panama. From here, the miners are a short boat ride from a Venezuelan port.

While this is going on, the Biyuyo team then matches each machine with a qualified applicant in Venezuela. The ideal candidate would be a small business owner with a long-term lease, as well as infrastructure like electric and internet in place.

4

When the applicant receives the machines, they contact Biyuyo through the official app, and the tech support team helps walk through initial setup. Additional support is available any time.

After ~1 year or when the lease is paid off, the ownership of the miner is transferred to the lessee, who is now free to keep all of the mining rewards from the machine. Support and mining pool services from Biyuyo will still be available, for a fee.
